विकसीत भारताचा भागीदार होऊ

Friends, after reading today's article, 100% you will definitely start looking at the stock market. Congratulations to those who have got the knowledge about the hidden secret of this stock market and have started moving with their eyes. But those people who have not solved the secret of this share market should read this article completely and give your feedback, WhatsApp No, Email Id will be received at the end and also visit your Facebook page.

Today's article will try to tell you how the stock market is the best business in the world. For that I need to compare. Anything big or small is judged as best only when it is compared with something

else. How share market is the best business. To see this it is necessary to compare it with other professions. Through this article we are going to compare traditional business and stock market business. We will look at this comparison in two parts.

First of all if we want to start any traditional business we need capital. If the capital is not enough or less then it is better not to start the business with partial capital. If the capital falls, then the business will lose. Everything can be boasted but money can never be boasted. We have been hearing this for a long time and it is absolutely true. Readers are happy to tell you can you start a [stock market trading](#) with the amount of capital you have? In the share market, the amount of capital is less or more, the return is also less or less. But it never happens that business cannot be done or work cannot be done in the stock market because of lack of capital. Even from 5000/-, 10000/- you can work in simple

stock market with crores of rupees. This is the first issue.

Now after the capital comes the second issue, the workers as well as the shop, office, shop at the right place, the interior, infrastructure, all these things will be at the right place, only if they are in the right place, the traditional business will run, if any of them is lacking, it will affect the business. The workers in the shop in the office need to be properly skilled. Everything needs to be perfect. In

any business, the professional has to combine all these.

Every month expenses like light bill, salary of workers, office or shop rent have to be paid. If this is stopped, then it does not take time for the business to stop. For that, you have to prepare for this expense from the beginning even if the business is not running.

But there is no need to take load of this while working in the stock market. None of these things are necessary when working in the stock market, neither the need for an office nor the workers nor the right place. This business is completely self-reliant. Do it whenever you decide. There is no need to spend a single rupee fix. The specialty of this business is that there is no fixed cost in any such business. This is another issue.

Third point comes Advertising and Promotion Readers would like to say that Advertising, Promotion is an integral part of business. It is the backbone of the business. As long as there is a

business, there is no substitute for advertisement and promotion in traditional business. He has to spend some share of the business.

But while working in the stock market, there is no need to do even a single rupee of advertisement promotion. Our third point is that no one needs to tell each other that they are working in the stock market.

The fourth point comes while doing any business, a businessman has to manage that business independently. We have to take an example to understand that if there is a big shop of dry fruits in the market yard, there is a businessman i.e. the shop owner Saddev who is present or another person from the house takes care of the place of the absent owner. If the owner does not come to the shop for a month and there is no other person, there is no option but to close the shop.

If the shop remains closed for a month, then all the lines of customers coming from where the

goods are purchased will be disrupted, all the obstacles will be created, the customer will be 100% broken because the era is very competitive. So it is not possible for the owner to leave his chair easily. If not, assume that the business is in trouble. However, this is not the case in the share market. No matter how big your turnover in the share market is, no matter how big the turnover is, you don't have to work permanently. You can work as long as you like. How many days can you take a vacation as you wish and live a happy life. The day you come back to the market, you will get the same business as you left.

You can do work in stock market when you want, leave when you want, this business does not depend on anyone but you. Readers want to go ahead and tell this if you are working in stock market investment then this business will continue to grow your money even in your absence. After you return, you will see your

business flourish even more. This is our fourth issue. The fifth point comes the responsibility of the transaction in the business. In the traditional business, the business is fully responsible for the transaction, whether it is a loan taken from the vendor or given to the customer, there is a daily turnover of 5 million to 1 crore or more. Therefore, if a loan is given, the businessman has to work hard to recover the loan. And if you don't borrow, it becomes difficult to do business in this era of competition, so in traditional business, borrowing has to be given on self-responsibility, at the same time, even if the relationship is bad, the businessman has to pass the fifth type of test, which has a direct effect on the business.

But in the fifth point, we are happy to tell the readers that BSE- (Bombay Stock Exchange) and NSE- (National Stock Exchange) are fully responsible for your transactions of crores of rupees per day.

Both these exchanges in India are run by NSDL - (National Securities Depository Limited). SEBI - (Securities and Exchange Board of India) regulates all the transactions in BSE and NSE from rupees to thousands of crores. Borrowing in the stock market is not the same as in other businesses

So we can work without compromise. Share brokers act as mediators in this transaction, so it is important with whom we open the Demat account required to work in the share market. CDSL - (Central Depository Services (India) limited) and NSDL - (National Securities Depository Limited) which you have taken as investment are safe in the government treasury. So, while doing this business, the businessman does not need to worry about the transaction at all. We can deal with certainty.

Sixth point comes if it is growing while doing traditional business then High Expansion Cost comes along with it.

If the shop is running too much, then there is not enough space to store the goods, for this the businessman has to spend money in all these things like buying space, getting a godown, increasing manpower, if he wants to survive in the competition, he has to expand and spend a lot. But in the share market, he can increase the number of deals on the same laptop, mobile, internet. For expansion, he does not need to spend a single rupee. The income increases as much as he increases in the investment market. At the same time, there is no increase in work. If a person makes a turnover of 10 lakhs a day, he can make a turnover of 1 crores alone. The sixth point is that profit can be made from it.

The seventh point comes if you want to close the business, if you want to take an exit, this is not easily possible in the traditional business. If you start a business but it doesn't work, all the investment and time is wasted. Before starting the business, the businessman has to think about the other side as well. Traditional business cannot be closed on the same day as you decide, for that you have to have an exit plan ready. So the financial loss can be reduced a little, this is a huge problem that stops a new entrepreneur from starting a business.

But in stock market you can close the business on the day you decide. Even if it is decided tonight, everything will be closed from tomorrow. If the market starts at 9:15 in the morning, you can close the business by selling all the goods, position square off, then you can close all the work on the same day by making a profit / loss book. Exit in this business is very easy.

If you work in the stock market with proper planning, if you invest in the right way, those shares, that investment will continue to work for that person as long as he is alive and will continue to work for the next generations as well. The seventh point is that this is such a great business.

After this, friends, comes the eighth point. In a traditional business anyone can easily verify your earnings. If the daily sales of a person's shop is around 10 lakhs and there is a margin of around 5% then anyone can calculate that that person earns 50 thousand rupees a day or if there are 200 people working in a person's company then that person can say that that person earns.

But no one can tell your earnings in share market business unless you tell it yourself. The eighth point is that the main point of saying that even if a person is with you all day, that person cannot know even a little bit about your transaction.

After this, friends, the ninth point comes, if a person wants to start a new business or run an existing business properly, for that, he has to do many government registrations, many certificates, licenses and also a lot of procedure in traditional business. Many government laws have to be followed. He has to suffer a lot in that. Everything has to be done, there is no alternative.

But while working in share market, only one Demat Account is required, we can open it in one day or we can open it online ourselves in 10-15 minutes. Just like a saving or current account is required for bank transactions, a Demat account is required for working in the stock market.

Tip - For more information about Demat Account like where to open your Demat in bank or financial broker service broker or discount broker you can contact us for best demat 898 898 4242 link is also given at the end of the article.

Another requirement is that no other registration, certificate, license is required to pay income tax to the government.

Fully legal work in stock market is done from bank account only. The government does not take responsibility for the transaction of one rupee in cash.

Then comes the tenth and last, my favorite point of all, transparency. There is very little transparency in other traditional businesses. If you want to buy something, the rate is lower for a customer, higher for a stranger, a different rate for a permanent customer, a different rate for a customer who comes sometime. At the same time, the one who buys in bulk is discriminated with a lower rate and the one who buys retail has a higher rate. Conventional business will run in this way. But friends glad to point out that there is 100% transparency in share market business.

Things like near, far, known, unknown do not happen in the stock market. Whether a person is in Mumbai, another is in Delhi, a third is in a village, a fourth is in a foreign country or anywhere in the world where there is internet, the share price of the same company looks the same to everyone at the same time. On the contrary, there is discrimination here between rich and poor or investors who buy in bulk quantity and small quantity. In the stock market, a person who buys shares in bulk gets expensive shares and a common person who buys less shares gets cheap shares.

Friends from Part 1 and Part 1 we have seen how stock market is the best business compared to conventional business. We have started this article to provide complete knowledge of the stock market in a transparent manner. Our organization Sharemarketkranti is always working to provide

transparent knowledge of share market to every person in Maharashtra.
